ANTELOPE HARVEST DATA RECONCILIATION REPORT

Prepared by: Craig Fager
Project No: 580221
Date: January 27, 1993

PURPOSE, SOURCE, AND CONTENT

The purpose of this project is to provide Department personnel working on the Wildlife Management PEIS with a summary of antelope harvest for the period 1971 to 1991. Harvest data were compiled from Harvest Survey Reports and reconciled against other documents at the district, regional, and statewide levels.

This report includes methods used to collect data for the Antelope Hunting and Harvest Data Summary, explanations, and problems encountered. It should be used as a guide when using data from the Antelope Hunting and Harvest Data Summary. Comparing results from that summary to other sources of Statewide Harvest Surveys should be done with care because of errors and missing data in some copies of Statewide Harvest Surveys. Further, some Summary values were derived from 2 or more Harvest Survey variables and will not exist in any Harvest Survey reports. For these reasons, all Summary data were documented for source in the note section as microfiche (MF) or hardcopy bound report (SW) version of the Harvest Survey.

The Antelope Hunting and Harvest Data Summary contains 23 variables compiled at the hunting district, regional, and statewide levels for the period 1971-1991. Variables were selected based on the current Statewide Harvest Survey reporting categories and format. The following is a list of variables and their report heading abbreviations:

YEAR
AREA = 5 Digit Hunting District, Region, or State
TSPLIC = Total Special Licenses
R_HNTR = Resident Hunters
N_HNTR = Nonresident Hunters
TTL_HNTR = Total Hunters
R_DAYS = Resident Hunter Days
N_DAYS = Nonresident Hunter Days
TTL_DAYS = Total Hunter Days
R_FAWNS = Resident Fawn Harvest
R_DOES = Resident Doe Harvest
R_BUCKS = Resident Buck Harvest
N_FAWNS = Nonresident Fawn Harvest
N_DOES = Nonresident Doe Harvest
N_BUCKS = Nonresident Buck Harvest
TTL_FAWNS = Total Resident and Nonresident Fawn Harvest
TTL_DOES = Total Resident and Nonresident Doe Harvest
TTL_BUCKS = Total Resident and Nonresident Buck Harvest
TTL_HARVST = Total Resident and Nonresident Harvest
RPERSUCC = Resident Percent Success

NPERSUCC = Nonresident Percent Success
TPERSUCC = Total Resident and Nonresident Percent Success
NOTES = Documentation of Source and Reconciliatory Calculations

MAJOR CHANGES IN THE ANTELOPE HARVEST SURVEY BY TIME PERIOD

1986-1991

Antelope Harvest Survey data were consistent in report content for this period. Report prefaces were added in 1988 and detailed analysis methods and license holder sampling percentages were documented within the Harvest Surveys. Antelope hunter effort was reported as: 1) Resident Days, 2) Nonresident Days, and 3) Total Days. Percent success for this period could not exceed 100% as percent success was defined as the number of successful hunters (hunters who killed 1 or more antelope) divided by the total number of successful hunters, and multiplied by 100. The total number of multi-district Doe/Fawn licenses valid in Regions 4, 6, and 7 were not recorded in the Special License category because these license numbers were recorded only as state totals. Doe/Fawn harvest and hunter effort was attributed to the appropriate district and region. Unlimited archery license (800 series) numbers and harvest were recorded in the Harvest Survey wherever they were valid starting in 1988. These data inflated the special license category because archery licenses were reported as statewide totals.

1981-1985

During this period, the Antelope Harvest Survey was divided into 3 independent reports: 1) Resident Antelope Harvest, 2) Nonresident Antelope Harvest, and 3) Combined Antelope Harvest. Little documentation existed within the Antelope Harvest Surveys prior to 1986. Hunter effort was reported as average days and was not compiled in the Data Summary. Archery harvest was recorded in the Harvest Survey for 1985 only. Most hunting district data for Region 7 was lost due to the combining of 2 or more hunting districts into special drawing options. Percent success for this period often exceeded 100% in many hunting districts. Hunting districts with more than one special application option (for example 700-01 and 700-02) posed special problems because data for all district options were not totaled within the Harvest Survey. These variables were manually combined. Percent success was not recalculated where this occurred.

1976-1980

Antelope Harvest Survey reporting categories for the period 1976-1980 were identical to the 1981-1985 period. However, the Nonresident Antelope Harvest Report was split into two independent reports (B10 and B2). This distinguished those nonresident antelope hunters that held big game combination licenses from those that did not. Where nonresident harvest within the same hunting district was recorded in both reports, variables were combined. Percent success was not computed in these cases. Overall, the

quality of the Harvest Survey diminished during this period as resident and nonresident hunter and harvest totals did approximate the combined report totals. I attributed these differences to differing levels of unknown harvest (harvest not attributable to a known sex class, hunting district, or license type) within the 3 reports.

1971-1975

Reporting categories for the 1971-1975 Harvest Survey were identical to the 1976-1980 categories. Overall data quality was low for this period. The B10 and B2 Nonresident Reports were named $151 and $35/36 and continued to distinguish between nonresidents who held big game combination licenses and those that did not. Special drawing options (for example 700-01 and 700-02) were not utilized during this period. For the period 1971-1972, two digit hunting district designations were utilized. In most cases 2 digit hunting district boundaries matched the later 3 digit hunting district boundaries. In these cases the 2 digit district number was recorded in the note section of the 3 digit hunting district.
